MAYBACH

SalarySync enables employees to access their earned salary anytime before payday, improving financial flexibility and reducing dependency on credit.

Live Demo:

<https://salary-access-mvp.web.app/>

Early Salary Access platform allowing employees to withdraw earned salary before payday — inspired by products like Earned Wage Access (EWA).

Team members: Kanishk, Paresha, Aryan

SalarySync – Real-Time Access

SalarySync is a financial wellness platform that updates the Indian payroll system. We are moving away from the old 30-day pay cycle to a modern "Earned Wage Access" (EWA) model. This lets employees access the salary they have already earned at any time during the month to pay for daily needs and emergencies

Average attrition rate at India Inc declined in 2024 amidst global uncertainties

Average attrition rate at India Inc declined in 2024 amidst global uncertainties

Deloitte India Talent Outlook Survey shows employees choosing stability over growth opportunities for now

Employee attrition is always a major concern for Indian **information technology (IT)** service providers. After a decline in attrition in FY24, all four top IT companies - Tata Consultancy Services, Infosys, Wipro and HCL Technologies - saw a moderate increase in FY25 as the rise of **Global Capability Centres (GCCs)** in India is putting pressure on them in retaining talent. Experts feel that attrition could also be under pressure this fiscal

The GCCs are also better pay masters with 15 per cent to 20 per cent higher than IT companies. They attract talent from IT companies especially those with less than five years’ experience. There are nearly 1,900 GCCs in India with around 150 coming up in the last 30 months. To offset the rise in attrition, IT companies have to hire more freshers this year, said sources.

With the global economy facing turbulent times, companies and employees have both become more cautious. A new report has highlighted that employee attrition in India Inc declined in 2024 as workers chose to prioritise stability over career moves amidst muted salary growth

According to the third edition of the Deloitte India Talent Outlook Survey, at a pan-India level, organisations reported an average attrition rate of 17.4% in 2024, a marginal decline from 18.1% in 2023.

India Inc's attrition rates in 2024 hit lowest point since 2020 amid subdued hiring environment, market uncertainties

India Inc's attrition rates in 2024 hit lowest point since 2020 amid subdued hiring environment, market uncertainties

Synopsis
Attrition levels in India Inc dropped to 17.4% in 2024, the lowest since 2020, due to reduced hiring, layoffs, and economic uncertainty. The IT/ITeS sector saw the most significant drop, with employee turnover falling sharply. However, companies anticipate increased hiring, which may lead to a rise in attrition in the coming quarters.

It revealed that attrition rates decreased across various sectors. In the IT sector, average attrition rate in 2024 declined to 15.1% from 19.3% in 2023 while in the ITeS segment, it fell to 10.8% from 18.7% in 2023. Similarly in life sciences, attrition rate reduced to 13.3% in 2024 from 18% in 2023 while in manufacturing the attrition rate fell to 10.6% in 2024 from an average 12.1% in 2023. There was also a marginal decrease in the average attrition in sector of financial services and other services.

However, surprisingly, sentiments differed in the consumer segment where the average attrition rate increased to 18.4% in 2024 from 17.4% in 2023.

“Amid market uncertainties and reduced hiring demand, job stability and internal growth opportunities have emerged as key drivers of retention, taking priority over year-on-year increments,” noted the report.

Prakhar Tripathi, Partner, Deloitte India elaborated that before launching of the survey the company spoke to Chief Human Resources Officers of four firms including a diversified conglomerate, a banking major, a consumer company as well as a tech giant on what is happening in the economy.

“We covered all sectors because we had the survey coming from clients, but we also wanted to stress test what's happening on the attrition side. Stability is what people are looking for at this point in time as people can see that businesses are facing headwinds,” he highlighted.

The Deloitte India Talent Outlook 2025 is a survey that aims to provide decision-makers with an overview of compensation, performance, talent management and HR technology data and trends from over 500 companies across seven sectors.

The Cash-Flow Gap Problem

The economy moves fast, but salary payments are slow

Many employees face **financial stress** due to monthly pay cycles, leading to high-interest debts and absenteeism, as 70% experience cash shortages mid-month, complicating their financial stability.

BOX 1

Employees spend daily but get paid monthly creating timing mismatch.

BOX 2

Mid-month emergencies cause financial stress and anxiety.

BOX 3

Forced to use high-interest moneylenders and loan apps.

BOX 4

Freshers wait up to 45 days for first salary.

The Solution: Earned Wage Access

- **Continuous Flow**
Salary treated as continuous flow rather than monthly lump sum
- **Daily Access**
Earn daily → Access anytime with flexible withdrawal options
- **Safe Withdrawal**
Withdraw safe percentage of earned salary to maintain financial stability
- **Zero-Interest**
Auto-adjusted at month-end with small flat transaction fee instead of interest

User Flow

Impact

- **Speed:** By using Cloud Run, the app can handle 10 users or 10,000 users without crashing.
- **Security:** Firebase Security Rules make sure employers can't see private chats, and employees can't see other people's data.
- **Market Plan:** We use a B2B2C model.
 - Employee pays: Small transaction fee.
 - Employer pays: Monthly subscription.

This is a great deal for companies because it saves them money on hiring new people by keeping their current team happy.

Driving financial empowerment forward
